

Control Services

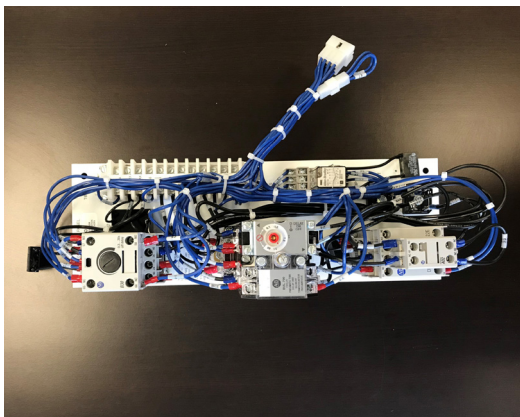

Control systems can be complex, and are successful when customer needs are understood and planning is well executed. This requires a knowledgeable team with great technical skills, a proven design, and detailed process.

At Springfield Electric, we understand the importance and have the team of experts to take your project from design to implementation.

Panel Building

Springfield Electric offers control panel building in our UL508 panel shop, with the ability to complete basic control panels as well as more complex designs. We offer a turnkey control panel solution. Our application engineers offer design expertise to fit your specific application needs.

Wire Harness Assembly

Springfield Electric offers wire harness assembly. Our team will evaluate needs to provide an assembly that includes all wiring marked, identified, and color-coded. Our harness assemblies can also meet various certification requirements. Springfield Electric's engineering team can provide detailed drawings if one doesn't currently exist.
