

Control Panel Building

Control systems can be complex, and are successfully executed when customer needs are understood. This requires a knowledgeable team with great technical skills, a proven design, and detailed process.

We understand the importance and have the team of experts to take your project from design to implementation.

We offer control panel building & design including when **UL508A** certification is needed. Our abilities range from OEM control panels to basic custom control panels to more complex control panels. Our Engineers can offer a turnkey control panel solution, with expertise to fit your specific application needs. If a design already exists, no problem, we'll build following the prints you provide.

Control Panel Building Process:

Evaluate needs
& details

Develop concept
including product
specifications

Customer review
& authorization

Engineers create
electrical prints

Assemble, test,
& ship panel

Our goal will always be to gather all necessary information and customer objectives. We apply knowledge of the latest products into a design to help optimize your efficiency, productivity and profitability all while minimizing your total cost of ownership. Their work and customer testimonials support this highly detailed team. Our approach is to create a *partnership for your success*.

Our Turnkey Solutions include:

- Controls Engineering
- Product assembly
- Electrical prints/schematics
- Labeling & testing

The Solution Center team of Engineers and Technicians has over 130 years of experience collectively. They take pride in precise execution of a well-defined project. We are ready to work with you at any stage of the process from concept to developing schematics to building the control panels.
